

Headlice Policy

Rationale:

- Head lice (pediculosis) are tiny insects that live on the human scalp where they feed and breed. Probably between 2-3% of primary school children are infested at any one time*. While they do not carry or transmit disease, they are the most common cause of head itch and scratching which may lead to infection and swollen lymph glands; therefore, they need to be eradicated.

Aims:

- To respond to reports of head lice quickly and effectively.
- To ensure that an effective process for treating head lice is well known and consistently followed.
- To ensure that parents and guardians are well informed about head lice treatment.

Implementation:

- Anyone can catch head lice.
- Head lice cannot fly, hop or jump. They spread from person to person by head to head contact, and by the sharing of personal items such as combs, brushes and head gear such as hats.
- While teachers and other staff members may believe that a child is infested with head lice, they are not permitted or qualified to search a child's hair, inspect for head lice, or diagnose a case of head lice.
- Upon suspected head lice, the principal will ensure that the parents of any infected child are contacted as soon as possible and informed that their child is to be excluded from attending school in accordance with the Health (Infectious Diseases) Regulations until the children have been treated.
- The principal will also provide parents of infected children with information about head lice treatment and prevention.
- Upon return to school, each excluded child will be required to provide to the principal either a report from a medical officer indicating that no live lice are present or undergo another inspection by an authorised officer and a clearance certificate issued.
- A nurse or authorised officer may be invited by School Council to check our school on a regular basis.
- The principal will ensure that information relating to the prevention and eradication of headlice appears throughout the year in the school newsletter, particularly at times of heavy outbreaks.

Evaluation:

- This policy will be reviewed as part of the school's three year review cycle.
